#### 1. String, Regex

### 1. String, Regex

#### 1.1 Solution 1

```
class Solution {
    public String solution(String s) {
        String jadenCase = "";
        for (String letter : s.split(" ")) {
            if (letter == null || letter.isEmpty()) {
                jadenCase += " ";
            } else if (!letter.substring(0, 1).matches("\\d")) {
                jadenCase += letter.substring(0, 1).toUpperCase() + letter.substring(1).toLowerCase();
                jadenCase += " ";
            } else {
                jadenCase += letter.toLowerCase();
                jadenCase += " ";
            }
        }

        if (jadenCase.length() == s.length()) {
            return jadenCase;
        } else {
            return jadenCase.substring(0, jadenCase.length() - 1);
        }
    }
}
```

#### 1.2. Solution 2: Ternary Operator

```
class Solution {
    public String solution(String s) {
        String jadenCase = "";
        for (String letter : s.split(" ")) {
            jadenCase += letter == null || letter.isEmpty() ? " " : letter.substring(0, 1).toUpperCase() + letter.substring(1).toLowerCase();
        }

        return jadenCase.length() == s.length() ? jadenCase : jadenCase.substring(0, jadenCase.length() - 1);
    }
}
```
