#### 1. Brute Force

## 1. Brute Force

```
def solution(answers):
    guess = [
        [1, 2, 3, 4, 5],
        [2, 1, 2, 3, 2, 4, 2, 5],
        [3, 3, 1, 1, 2, 2, 4, 4, 5, 5]
    ]

    score = [0, 0, 0]
    for i, a in enumerate(answers):
        if a == guess[0][i % len(guess[0])]:
            score[0] += 1
        if a == guess[1][i % len(guess[1])]:
            score[1] += 1
        if a == guess[2][i % len(guess[2])]:
            score[2] += 1

    highest_score = max(score)
    result = []
    for i, s in enumerate(score):
        if score[i] == highest_score:
```

```
        result.append(i + 1)  
    return result
```
