1. heapqueue

```python
import heapq

def solution(scoville, K):
    heapq.heapify(scoville)
    result = 0

    while scoville:
        s = heapq.heappop(scoville)
        if s >= K:
            return result
        if len(scoville) < 1:
            return -1
        heapq.heappush(scoville, s + 2 * heapq.heappop(scoville))
        result += 1

    return -1
```
